Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/13/09 has been entered.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claim 11, on line 11, replace the word "frames" with --fragments--.

Allowable Subject Matter

3. Claims **3, 5-11, 13-17, 23-25, and 27-30** are allowed.
4. The following is an examiner's statement of reasons for allowance:

Regarding *amended* claim 3, *Bilic* teaches the frame reassembly method via network interface adapter 20 shown in Figure 2.

Bilic also teaches the reception of a detected fragment of a frame as spoken of on column 7, lines 48-51.

Bilic also teaches the IP header checksum computation of the frame reassembled from received fragments as spoken of on column 8, lines 48-52.

Bilic also teaches the allocation of space in host memory 44 (buffer space) for received fragments of a frame as spoken of on column 8, lines 1-6.

Bilic also teaches the processor 34 setting a frame timer for the frame as spoken of on column 8, lines 8-9.

Bilic also teaches the processor (network interface circuitry) that organizes (sorting) the fragments in the host memory (buffer space) based on the fragment offset fields (fragment number) and length parameters in the fragment headers as spoken of on column 3, lines 23-25 as well as column 8, lines 31-34.

Bilic also teaches the processor (network interface circuitry) that periodically determines that one or more fragments have been lost (missing) in the event that a given frame has not been reassembled completely within a predetermined time limit as spoken of on column 3, lines 30-33 as well as column 8, lines 14-19.

Bilic as well as the other prior art of record fail to teach "determining that the first packet fragment is valid by matching a first checksum included in the first packet fragment with a second checksum included in a second packet fragment stored in the reserved buffer space" in *combination* with the other limitations of *amended* claim 3.

Regarding claims **5-10 and 28**, these claims are further limiting to claim **3** and are thus also allowable over the prior art of record.

Regarding *amended* claim **11**, this claim is allowable for the same reason as provided for claim **3** above.

Regarding claims **13-17 and 29**, these claims are further limiting to claim **11** and are thus also allowable over the prior art of record.

Regarding *amended* claim **23**, this claim is allowable for the same reason as provided for claim **3** above.

Regarding claims **24, 25, 27, and 30**, these claims are further limiting to claim **23** and are thus also allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Evans et al. (U.S. 2002/0087935) as well as Lapinski et al. (U.S. 7,000,838) are other references considered relevant to this application, but also fail to provide the teachings recited above.
